

BEAT THE CARBON TAX!!

The CARBON TAX.... Will be active as of January 1, 2017. It is based on \$20 per tonne of CO₂, and rising to \$30 in 2018. This will cost the average household \$1000 annually/ 7.5% extra. Adding to this, utility companies will pass their added costs on to consumers, at a time when most households and businesses are struggling.

The SOLUTION..... NOW is the time to be PRO-Active. Most households and Business waste as much as 50% or more energy just on old windows, poor insulation, old furnaces, etc. By investing in more energy efficient solutions and, new technologies that are readily available, costs of energy can come down dramatically, and investments can **PAY for Themselves!**. Additionally, there are a number of **efficiency incentives** of which you may be unaware.

The gres Integrated Approach:

We work with you to assess your consumption needs and patterns, then offer intelligent and economic solutions, and advise you on:

- Building Improvements and Asset Planning
- Financial Payback analysis, financial planning, and selection of Best Energy Incentives. *(We Don't leave you stuck with "How DO I Pay for It?" We show you how it pays for itself!)*
- Real-Time Metering and Monitoring for onsite and accurate information, allowing effective management BEFORE your bill comes
- Implementation of Solar, Wind, Geothermal and more.
- Professional Project Management to get it done on-time and On Budget
- Education and Training for personnel as required for your needs
